

ICDL MODULE **3D DESIGN**

Syllabus Version 1.0

Purpose

This document details the syllabus for the ICDL 3D Design module. The syllabus describes, through learning outcomes, the knowledge and skills that a candidate for the Module Name module should possess. The syllabus also provides the basis for the theory and practice-based test in this module.

ICDL 3D DESIGN

This module sets out essential concepts and skills relating to demonstrating competence in using 3D Design software.

Module Goals

Successful candidates will be able to:

- Use the 3D design application to create, import and export 3D models.
- Use model view tools like pan, zoom, rotate, and save and recall model views.
- Create, modify, save, and load coordinate systems.
- Carry out the geometric drawing of points, lines, arcs, splines, circles, polygons and use surface modelling for the extrusion of surfaces and the creation of surface revolutions, planes, and edge surfaces.
- Manipulate object/graphic elements and create and modify solids and parametric objects.
- Use orthogonal, axonometric and perspective views.
- Create photorealistic presentations by rendering a model or scene and by creating lights, materials, and background scenes.
